

TOWN OF DANVILLE
ARPA FUND SURVEY PROJECT INFORMATION

The Town of Danville is earmarked to receive **\$639,103.88** in American Rescue Plan Act (ARPA) funds. The Town would like to use the funds in conjunction with State and/or Federal grant funds to maximize the funds received for the future town projects. Typically, State and/or Federal grants may require a 20%-30% cost share of the town for an infrastructure project. This means that a \$200,000.00 paving project has just cost the town \$40,000.00, and leveraged the unspent \$160,000.00 for another project.

Sidewalk Construction from Town Fields to Center of Town:

Estimated Cost: \$500,000.00

The sidewalk project would run from the school driveway to the Town Field Complex on the Peacham Road. This is to provide safe walking conditions for children walking from Danville School to the town fields for sport related activities. This would also link the Lamoille Valley Rail Trail head at the old Railroad Station to businesses in town.

Town Sewage System and Sewage Treatment Upgrades.

Estimated Cost: \$100,000.00 - \$600,000.00 (*Dependent on needs after study is done*).

North Danville School Community Center Heating Upgrades.

Estimated Cost: Undetermined at this time.

This would include upgrading the current outdated boiler system, and the possible exploration of solar panels and the addition of heat pumps.

Improved Water Runoff Infrastructure on Hill Street.

Preliminary Estimated Cost: \$532,228.00

This project would include upgrades to the ageing Stormwater Infrastructure & drainage of Hill Street, as well as side upgrades to existing sidewalks and the extension of sidewalks to the hill street park.

Fire Station Upgrades.

Estimated Cost: Undetermined at this time.

This would include possible upgrades or replacement of the Danville Village Fire Station and the North Danville Village Fire Station. Due to the size of new and future fire trucks, building renovations may be needed.

Construction of Parking Lot next to Town Hall:

Estimated Cost: \$150,000.00

This would be for the final construction and paving of the new parking lot next to the Town Hall. This will also include the exploration of a Solar Canopy with an EV Charging station and solar heat alternatives for the Town Hall. This would be an additional approximate cost of \$75,000.00, and would have to meet all local and state zoning bylaws.

Other:

This would be a part of the survey that allows everyone to discuss a project, need, or general discussion for the use of the ARPA funds that the Town of Danville is earmarked to receive.
